

Householder and other minor extensions in Flood Zones 2 and 3

We recommend that:

Planning Authority:

- 1) Refer the applicant to the standing advice pages on the Environment Agency website or provide them with a copy of this page for them to include as part of the planning application submission.
- 2) Check the planning application to ensure that one or either of the mitigation measures from the table below has been incorporated.

Applicants:

Complete the table below and include it with the planning application submission. The table, together with the supporting evidence, will form the Flood Risk Assessment (FRA) and will act as an assurance to the Local Planning Authority (LPA) that flood risk issues have been adequately addressed.

Additional to choose one or either of the flood mitigation measures above	Additional to include the LPA with the developer to demonstrate the measures have been incorporated into the scheme	Further information on the flood mitigation measures in the table above
Other: Floor levels within the extension must be set within the agreed floor levels, for example Flood Risk Zone 3. The profile of the proposed development has been incorporated where appropriate.	Details of any local flooding / drainage and elevation of floor levels, to be submitted in accordance with 'Protecting the Flood: performance of new buildings' CLE (2007)	YES
Or: Floor levels within the extension will be set 300mm above the known or modelled 1 in 100 annual probability river flood (1%) or 1 in 200 annual probability sea flood (0.5%) in any year. This flood level is the extent of the Flood Zone	This must be demonstrated by a plan that shows finished floor levels relative to the known or modelled flood level. All levels should be stated in relation to Ordnance Datum ¹	

Subterranean/basement extensions

Due to the risk of rapid inundation by floodwater basements should be avoided in areas at risk of flooding. The LPA may hold additional guidance for basement extensions.

Self-contained basement dwellings are 'highly vulnerable' development and should not be permitted in Flood Zone 3. We are opposed to these developments.

Continued...

¹ Ordnance Datum or the abbreviation 'OD' is the mean level of the sea at Newlyn in Cornwall from which heights above sea level are taken. The official Ordnance Survey maps measure heights above OD for example, though these are not accurate enough for a flood risk assessment.
