Dear Sirs,

RE: Japanese knotweed Survey - Haverhill

Further to my second site visit on 31st May 2016, I can confirm that neither phase 1A, 1B or the remainder of site have any evidence of Japanese knotweed.

We believe that the site is completely clear of Japanese knotweed contamination.

We did note Horsetail (*Equisetum arvense*) in phase 1A, close to the corner of Ann Suckling Rd and Wrating Road.

It is recommended that the Horsetail is treated at least once 2 weeks before ground is broken

If you have any questions or wish to discuss the matter further, please do not hesitate to contact me.

Yours sincerely,
Dan Rudland.
