1.0 Setting out beds shall be set out using radii scribed on the ground

using two pointed stakes and a line between, or with site marker paint. The junction between convex and concave curves shall be cut to form a smooth and even flowing line. Check that all setting out conforms to the plan before cultivation and planting works are carried out. Failure to do so may result in rejection of the work by the landscap rchitect and may require amendment at the contractor 1.2 All planting beds shall be a minimum of 1 metre wide.

except where there is insufficient space, due to the constraints of walls and path edgings and their foundations. With narrow beds between walls/ fences and path edigings, ensure that the bed has space free from concrete footings before planting. If the bed is sealed with concrete, then the landscape contractor shall contact the site manager or landscape architect to determine if footings are excessive and can be reduced or else, the bed can be paved. The width of all beds will be checked by the inspecting landscape architect and where the width

is not as drawn, the contractor shall re- cultivate them to

the specified width at his own expense. 2.0 Ground preparation

2.1 Pre-planting herbicide application:- Apply by suitable spraying aparatus, an approved translocated systemic herbicide to the manufacturer's instructions and to 1997 Control of Pesticides Regulations and 2020 COSHH regulations on all beds, except those which are both weed free and are to receive agrotextile sheet mulch. Spray immediately if any weeds are present. If no weeds are showing but planting is delayed, spray after one month following cultivation, to allow dormant seed to germinate. All spraying shall be carried out by skilled and qualified operatives, using protective clothing, in suitable weather (no wind) and any damage caused by spray drift, from incorrect usage or spillage, shall be rectified at the contractor's own cost. Do not spray near a water body.

Repeat as necessary to ensure complete kill and rake off all dead material from site. 2.2 Carry out the following works to the existing topsoil on site to ensure it Conforms to BS 3882:2015, being free from rocks larger than 50m diameter, concrete, all roots, wire, brick, and have less than 20% clay. Allow for pre-application of herbicide as above. Fertilise with 100g per meter square of Hortibase CRE (16-8-12) slow release fertilizer, in accordance with the manufacturer's instructions. For beds less than 5 meters in width, fork over thoroughly or machine rotovate soil to a depth of

450mm, ensuring that the subgrade and topsoil are completely broken up and free draining, relieving any compaction. For beds greater than 5 metres in width, break up the subgrade and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 500mm, except where there are services, or within 10 meters of tree stems or 3 meters of existing hedges. Do not rip areas where roots greater than 10mm diameter are

2.3. Determine before submitting a tender, the extent of support from the site manager with ground preparation: ensure soil of all planting beds is graded to a level 65mr elow adjacent grass or paved surfaces, within 400-600mm of edges to ensure bark or wood chip mulches are retained. Where grass is proposed adjacent to paving, then the soil level shall be flush with the adjacent paved surfaces, to receive rain water run off. Th andscape contractor is responsible for ensuring that the final product conforms to the specification even where the developer and/or main contractor have failed to supply and spread topsoil to the recessed level. The landscape contractor shall allow for adjustment of levels, as specified

above, including for re-grading subsoil and topsoil. Where beds are sloping, ensure that topsoil is graded to the specified levels below pavement & grass surfaces within 400mm of the edges of the bed. This is to allow for sheet mulch and bark or wood chip mulch so that mulch does ot spill out on to pavements and also to allow surface water to drain from paths on to planted areas. 2.4 Sloping ground that is shown to be turfed where there

is paving adjacent to it topsoil levels of the grass areas shall be graded to finish flush with the finished pavement level to allow surface water to drain from pavements to soft areas. Soil of grass areas should therefore never be proud of paved areas. Soil levels more than 10 mm below pavement edges will cause mower damage on cutting.

5.5 Imported topsoil (where specified and sanctioned by the employer) for making up ground, shall conform to BS 3882: 2015, and be free from rocks (over 50mm diameter), concrete, roots, wire and brick, and have less than greater than 20% clay. Such soil shall be cultivated as set out above. Representative samples shall first be ed by the landscape architect before being supplier to site. No imported soil shall be supplied to site without a

written instruction. 3.0 Planting 3.1 All planting must be carried out in accordance with the tender document, and accompanying drawings. Refer to the tender document for the preparation of existing topsoi

and required depths for planting, turfing, and trees, and also for contractual mainter 3.2 No substitutions will be accepted without the prior agreement of the inspecting landscape architect. The contractor shall replace at once at his own cost any stock 6.2.2 Top soil depth: Topsoil spread from the site size, species or variety of plant which has not been species of valley of plant which has not been specified on the planting plan and schedule, unless via prior written agreement, a substitution has been agreed by the inspecting landscape architect. All plants shall be true shrub beds to leave beds 65mm below finished to size specified in the schedule of plants and associated notes, (2L pots are 17cm diameter and 13cm deep, 3L pots are 19cm diameter and 15cm deep, 5L pots are 22.5cm diameter and 18cm deep, 10L pots are 28cm be spread to a level 10mm below paving inorder diameter and 22.5cm deep, 15L pots are 33cm diameter and 30cm deep, 25L pots are 38.5cm diameter and 35cm deep, 30L pots are 41cm diameter and 36cm deep, 40L pots are 50cm diameter and 45cm deep, 50L pots are 55cm diameter and 50cm deep) The pot sizes will be checked on site to ensure compliance with those specified. Pots will be rejected if shrubs are supplied of a size which are not fully grown into the pot e.g. a 9cm plant recently potted into a 3L container. All shrubs, shall possess a height and spread in accordance with the plant schedule. Anything less than HTA National Plant Specification standards for each species and pot size will be rejected. Plant stock shall be bushy, healthy, disease free, not pot bound, leggy or spindly. There should be a minimum of 5 breaks per shrub. This specification is the

minimum of 5 breaks per shrub. This specification is the minimum standard required and any stock falling below this standard. In the scheduler of the inspection this standard, in the sole opinion of the inspecting landscape architect, will be rejected and shall be lifted and replaced at the contractor's expense. 3.3 All shrubs, herbaceous plants, whips and transplants

shall be watered in on planting with 20 litres per square metre. Trees shall be watered in with 50 litres per tree position. Water thereafter during the contract period at weekly intervals with 30 litres of water per tree position

3.5 Proposed standard trees to be true to the species, variety and size as specified on the planting plan, to include 2No. 2.0m long, 100mm diameter, chestnut stakes, above ground dimension to be 1/3 the height of the tree actives to be direct unreliable to the species of the tree actives the t the tree, stakes to be driven vertically, supply and fix becurely (twice screwed to each end) a half round cross brace (100mm diameter) with rubber spacer block fixed between tree stem and the cross brace and secured with between tree stem and tree stem and tree stem and tree stem and tr

with the cross brace.

3.6 Turf to be of cultivated grade such as Rolawn "Medallion", or other of similar quality and source, approved by the landscape architect. The contractor shall replace at once any turf rejected by the landscape architect at his own cost. insure that the turf is laid flat and is free from hollows, lumps and bumps, cracks or brown or dried patches or other defects and that turf is well

planks to prevent compaction. 3.7 Self dinging dimbing shrubs or wall shrubs, with "S" written after the dimber name, shall be trained to the inspection by experts and if found wanting, shall wall/ence with heavy duty, plastic coated garden wire. Training wires shall be attached vertically to the wall/ence but moreon a distance di distance distance distance distan at the decorating contractors own cost. by means of 125mm long stainless stele eye screw fittings. Position 1No. at 250mm from ground, and 1No. 7.5 All wood work shall be pressure treated with

with plastic coated garden wire tags. 3.8 Twining varieties of climber, with "T" written after the climber's name (in specially prepared pits or general shrub beds) shall be trained to walls/ fences by mounting product COSHH Regulations 2020 and product COSHH sheet. ready-made trellis panels 1.8 x 1.8m generally (but 1.8 ; 0.6m for corners or where space is restricted). Include for adapting any panels for locations where walls or fence are lower than 1.8m. Fix trellis panels to the walls/ fence

using non rusting screws 125mm long (to be approved corporating 50mm cube wood spacing blocks to ens that the panel is mounted sufficiently far from the wall/ fence to allow twining of stems. Ensure that all timber is ressure impregnated with a non phyto-toxic preservation and then painted with a dark brown non phyto-tox reservative wood stain such as Sadolin "Classi Jacobean Walnut or similar and approved. Ensure that trellis is not in contact with the ground. Train the climbing shrub to the trellis with plastic coated garden wire tags.

3.9 Climbers specified outside proposed shrub beds shall have specially prepared climber pits. Climber pits shall be 400mm x 400mm and 450mm deen (minimum size), and be backfilled with topsoil (from site - unless otherwise agreed). Ensure the base of the pit is thoroughly broke up and free draining before back filling with topsoil. Ensure no damage to foundations and services, and make good all structures and surfaces disturbed. Fertilise with 50g of Hortibase CRF (16-8-12) slow release fertilizer. Water with 20 litres of water per climber pit.

4.0 Mulch 1.1 Planting shall be set out exactly as shown on the 4.1 Supply and spread suitable biodegradeat sheet mulch over planting beds, previously, cultivated, graded and fertilized topsoil before planting, and peg down at a minimum of 500m entres, (300mm at edges) and beds less than 1m wide. Pegging this densely is essential to preven flaps of material becoming exposed. Refer to the r biodegradable sheet mulch on plan 4.2 Following planting, supply and spread evenly

3m MAINTENANCE

ACCESSES STRIP

* * *

"Rustic" Wood Chip, available from CPA horticulture tel:01994 231121 to a depth of 50mm evenly spread over all planted areas. Finished mulch levels shall be no higher than 15mm below pavement or grass levels, 300-400mm of bed edges, to avoid any spillage onto pavements or lawns. N.B. no substitution of mulch type will be acceptable. It is essential to have a no-fines, large particled, brown wood chip to reduce weed grow reduce wind blow and prevent break down and rotting. 5.0 BS codes

5.1 All workmanship and materials shall conform to the following codes:-5.1.1 General landscape operations (excluding hard surfaces) - BS 4428:1989. 5.1.2 Trees in relation to construction- BS 5837: 2012 and BS 6549:1999. BS 3998:2010 (recommendations for tree works) unless otherwise specified. Arboricultural Association -Standard Conditions of Contract and Specifications of Tree Works 1996. 5.1.3 Nursery stock in accordance with latest horticultural trade association nursery stock specification entitled "National Plant Specification 2010".

Plants shall conform to: BS 8545 : 2014 Trees from Nursery to Independence in the Landscape -BS 3936-1 : 1992 Nursery Stock - Specification for trees and shrubs. -BS 3936-2 : 1990 Nursery Stock- Specification for roses + AMD 6628.

-BS 3936-4 : 2007 Nursery stock- Specification for forest trees. -BS 3936-9 : 1998 Nursery stock- Specification forbulbs, corms and tubers. -BS 3936-10 : 1990 Nursery stock- Specification for ground cover shrubs.

-CPSE-Committee for Plant Establishme Handling and establishing landscape plants 1996 Part 3, paragraphs 6.2 to 6.6. 5.1.4 Glossary for Landscape Works BS 4428 :1986 5.1.5 Turf - BS 3969:1998 + A1:2013 commendations for turf for general 5.1.6 Seeding - EEC Regulations 1974. Use bl labelled certified varieties to EC purity and

germination regulations. When requested, submian official seed Testing Station Certificate of germination, purity and composition 5.1.7 Topsoil - BS 3882: 2015 .1.8 Pesticides: Control of Pesticides Regulation 1997;The Health and Safety at Work Act 1974(2005); the COSHH Regulation 2020 and the product COSHH sheet. The Water Act 2014; the

Floods and Water Amendment (EU Exit Regulations 2019; Control of Pollution Act 1974; Hedgerow ACT 1997; Wildlife and Countryside Act 1981; Countryside and Rights of way Act 2000. GENERAL NOTES FOR THE DEVELOPER

6.0 Tree protectio 6.1 Any existing trees to be retained, are the responsibility of the main contractor on site who shall take all necessary protective measures set out in BS 5837:2012 to ensure no damage to stems or roots, to prevent compaction from vehicles or storage of materials, contamination of soil from spilages, scorching from fires and instability or stress from changes of soil level. The landscape contractor is however responsible for ensuring that neither plant, materials or labour are cause of any damage to existing trees, and like the employer, the landscape contractor shall replace at once any tree damaged on site, supplying and planting a tree of the same species and size, at his own cost. Protection barriers will comprise a scaffold framework in accordance with igure 2 of BS 5837:2012 (The BS). he framework will consist of vertical and horizontal

scaffolds with vertical tubes spaced at no more than intervals and driven into the ground. Weld mesh (Heras or similar) panels will be securely fixed on to framework with wire or scaffold clamps. Tubes will be driven into the ground to a minimum depth of Supporting struts will be fixed to the inside of the

barrier to ensure maximum rigidity 6.2 Ground work

6.2.1 Soil levels: soil levels for shrub beds and grass areas should have any compacted subgrade thoroughly broken up by machine before instructing the ground worker to spread topsoil or the landscape contractor to commence work or e beds will become waterlogged in wet weather and the plants and turf will die.

should be to the following minimum depths:-Shrub beds: 450mm. Grass areas 150mm. allow for excavation of 415mm of the subgrade for pavement or grass areas in order to receive sheet and bark mulch. Tree pits will be dug by the receive the turf. Topsoil for grass seed areas, the soil level shall be flush with any finished paved surfaces after settlement to allow for rain water to drain onto soft surfaces. Settlement shall be no greater than 5mm or problems will be encountered with mowing (the blades in danger of touching concrete edgings) or where soil is proud of pavements, then drainage problems will be

6.3 Existing topsoil and imported soil shall conform to BS 3882:2015, and be free from compaction, rocks/bricks greater than 50mm diameter, concrete, wire, roots, debris, oil, cement and

encountered.

7.0 Hardworks

7.1 Hard works, unless otherwise agreed, shall be carried out by the developer or main contractor, and all materials and workmanship shall be in accordance with the construction details and the layout plan.

akty intervance in the species, variety and size as specified on the planting plan, to include 1.6m long, 100mm diameter, chestnut stake above ground dimension to be 175 the height of the tree, etakes to be driven vertically and 1No. sackdolth or rubber etakes to be driven vertically and 1No. sackdolth or nubber etakes to be driven vertically and 1No. sackdolth or maximum and the tree etakes to be driven vertically and 1No. sackdolth or nubber etakes to be driven vertically and 1No. sackdolth or maximum and the tree etakes to be driven vertically and 1No. sackdolth or nubber etakes to be driven vertically and 1No. sackdolth or nubber etakes to be driven vertically and 1No. sackdolth or maximum etakes to be driven vertically and 1No. sackdolth or nubber etakes to be driven ver

between tree stem and the cross brace and secured with 1No. sackdoth or rubber tie so the tree is securely restrained and there is no chance of the the stem chafing with the orces brace to the complete satisfaction of the Landscape Architect. The decorating contractor shall prepar the galvanized surface by washing with detergent and water and scrubbing with a scouring pad until removed & then allowed to dry thoroughly. Supply and paint 'Icosit 6630' from Sika Ltd (tel. 01707 is free from hollows, lumps and bumps, cracks or brown or dried patches or other defects and that turf is well watered before before laying and again after laying. Turf areas shall be taped off using high-vis tape until well established. Access shall be only with timber scaffold planks to prevent compaction 374444) applied with a turkhead brush strictly in galvanized surface is thoroughly dry at temperatures above five degrees celsius and in any event above the current dew point

250mm from top of the wall/fence, and string the wire tightly between the fixings. Train the dimber to the wire applied by vacuum pressure. The timber shall then be stained with 3No. coats of Sadolin
