**TREE LOCATIONS TBC UPON DETAILED
LIGHTING AND HIGHWAYS ADOPTION PLANS**

INDICATIVE THUMBNAILS

Corridor of tree planting and native species through the central open space creates habitats for bats and other wildlife.

Proposed native trees either individually or in groups to enhance the public open space, with feature trees used to aid wayfinding.

Native species-rich hedgerow structure with standard trees will enhance the site by providing a valuable ecological corridor, as well as natural screening and aesthetic appeal.

Bee bricks, bird and bat boxes, log piles and hedgehog permeable fencing will provide habitat opportunities.

Native structural tree and shrub buffer mixes will enhance biodiversity and existing green infrastructure of the site.

Proposed play areas will provide exciting and imaginative play experiences, and an area for sport.

Wildflower grassland will be used in amenity areas to increase plant diversity, and act as a nectar source for invertebrates.

Allotment space to be provided to allow the local community to engage with nature and become more sustainable.

Flowering lawn areas will contribute to biodiversity, creating species rich habitats and enhanced green infrastructure for residence.

'Play of the way' from raw materials such as boulders, link pathways and provide play experiences across the site.
